

think: Kinetico K5
Drinking Water Station
FACT SHEET

PRODUCT DESCRIPTION

WHAT: The Kinetico K5 Drinking Water Station is the only expandable drinking water treatment system on the market. It was created to solve an individual's existing water quality issues as well as any that may develop in the future.

WHO: The Kinetico K5 Drinking Water Station is sold through Kinetico's nationwide independent dealer network. Consumers can find their local dealer by visiting the Kinetico Web site (kinetico.com) and using the Locate Your Water Professional search engine interface.

WHY: This first-of-its-kind drinking water treatment system was developed because water quality and conditions change over time due to chemical leaching, degrading pipe infrastructure, biological events and other factors. Consumers can now solve their current and future drinking water treatment problems, eliminating the need for upgrading to a new system in the event that their drinking water treatment needs change.

DETAILS: The system offers consumers the ability to customize their water treatment with the installation of specific water filter cartridges, each addressing a specific water quality issue. Consumers can add or remove cartridges over time, as their water treatment needs change. Nine cartridges are currently available; additional cartridges are in development.

PRODUCT ATTRIBUTES

- First expandable drinking water treatment system available
- Customizable system features unique five-cartridge design; can be expanded at any time according to household water treatment needs
- Nine different prefilter and auxiliary filter cartridges available; additional cartridges in development
- Certified to remove more contaminants than any other system*
- Can produce more than 40 gallons of drinking water daily
- Creates biopure water with the Purefecta® Virus/Bacteria Guard cartridge, the highest quality drinking water possible
- Adds valuable minerals to treated water with Mineral Plus cartridge
- Flow from faucet is up to two times greater than any other drinking water system on the market
- Flow from faucet stays strong and doesn't turn into a dribble after a few seconds of use like other drinking water treatment systems
- Electricity free; non-electric system runs on hydropower, not electricity
- EverClean® Rinse achieves superior water quality consistency and extends product life
